CARSONITE® UTILITY MARKERS ARE THE ANSWER TO YOUR UNDERGROUND UTILITY IDENTIFICATION NEEDS.

LIGHTWEIGHT

EASY TO INSTALL

IMPACT RESISTANT

LONG-LASTING

VANDAL RESISTANT

WEATHER RESISTANT

CARSONITE® UTILITY MARKERS

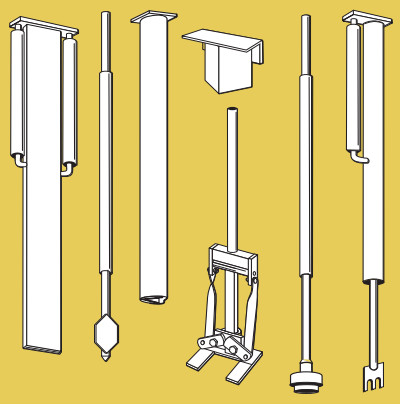
Carsonite's Utility Markers remain a leading utility identification product because of its simplicity of design and long-standing reputation for durability year after year.

Our lightweight, flat-style markers install in minutes using a manual driving tool. Because of its flat and light-weight design, less time is required for installation. That means reduced installation cost and less time spent in hazardous work zones.

Made from fiberglass reinforced composite material, Carsonite Utility Markers survive ditch burns, vandalism, vehicle impacts, and years of outdoor exposure better than wood, metal, concrete or plastic.

LINEMARKER

Ideal for marking underground facilities and right-of-way locations. Consists of a 3.5" white post with a 3.8" enhancer, a "T" anchor and a domed cap to keep dirt, moisture and insects out of the tube; made from a tough, impact resistant themosplastic elastomer. LineMarker remains durable for years and is available with UV resistant integrated direct graphics or decals.



We offer a complete line of Carsonite installation tools including:

- post drivers
- pilot hole drivers
- post pullers
- driving caps

CARSONITE® TEST STATIONS

TRACE-O-FLEX

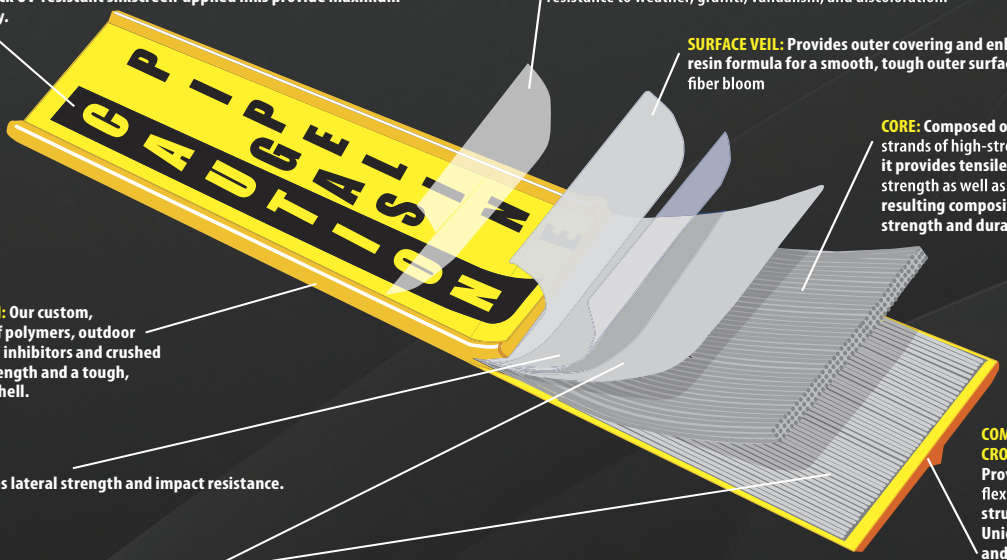
A high-visibility marker and terminal for locating non-metallic pipelines. Its two-terminal access provides secondary trace capabilities or dual tracing. Used when a test station is required in areas susceptible to vehicle or equipment impacts. It can be ordered with optional #12 AWG factory installed wire.

CATHODOFLEX

Recommended for applications where a cathodic test station is required in an area susceptible to vehicle or equipment impacts. Cathodoflex is a two-terminal cathodic protection post that is flexible and impact-resistant. It serves as a test station and pipeline marker all in one unit. It can be ordered with optional #12 AWG factory installed wire.

Tracing a water line from a Trace-O-Flex pipeline marker using the Fisher TW-6 pipe and cable locator. (see back page for more information on our complete line of Fisher products.).

CARSONITE® INVENTED IT, PATENTED IT, AND STILL DOES IT BEST.



DECAL: Premium cast vinyl with aggressive adhesive that prevents bubbling and edge curl. Thick UV-resistant silkscreen-applied inks provide maximum outdoor durability.

U.V. SHIELD®: Graphics are embedded under a protective laminate, which offers resistance to weather, graffiti, vandalism, and discoloration.

SURFACE VEIL: Provides outer covering and enhances absorption of resin formula for a smooth, tough outer surface, reducing fading and fiber bloom

CORE: Composed of more than 750,000 strands of high-strength glass fibers, it provides tensile and compressive strength as well as flexibility. The resulting composite has exceptional strength and durability.

RESIN FORMULATION: Our custom, proprietary blend of polymers, outdoor stable pigments, UV inhibitors and crushed marble provides strength and a tough, UV-resistant outer shell.

FIBERTEX™: Enhances lateral strength and impact resistance.

COMPUTER-OPTIMIZED CROSS-SECTION: Provides a maximum flexibility and structural integrity. Unique middle support and edge rails enhance strength, driveability, and protection to decals.

CONTINUOUS STRAND MAT: Randomly arranged glass fibers surround the core, providing lateral strength and preventing chipping and splitting.

We offer unheard turnaround for your utility marker needs. We do not charge for setup. There is no additional charge for using your logo.

DECALS

Our decals are manufactured for high visibility, durability, and legibility. We use high-quality advanced sheeting and adhesives to prevent edge curl and bubbling. Decals are available in reflective sheeting and a variety of colors. Our decals are the perfect answer for your decal requirements.

CUSTOM SIGNS

Our signs are customized to meet your requirements. Signs are designed for 15 year durability. We offer aluminum or composite fiberglass signs. Steel or composite sign post are available in green, yellow or white. Mounting hardware is included with each sign and post order.

WE MAKE IT EASY – you can e-mail your artwork to **info@ jimcoxsales.com.** There are no set up charges for custom art work. Call us with any questions or for more information.

TEMPORARY MARKING FLAGS

We offer a full line of highly visible and durable flags for temporary marking of utility lines at construction sites. Our flags are made of weatherproof and fade resistant materials. Available with wire, plastic or fiberglass staffs and in seven standard colors as well as fluorescent red, orange, pink and lime.

FIND IT FAST... WITH FISHER

Fisher research Laboratory has been supplying the needs of the underground utility industry for over 70 years. A pioneer in underground locating technology, from Dr. Fisher's very first patented metal detector to the advanced digital instruments of today. Fisher has earned a reputation of excellence built upon 7 decades of service. If you're looking for affordable, tough, simple to use equipment offering superior quality and performance, find it...with Fisher.

Pipe and Cable Locator
TW-6

Features

- Crystal controlled frequency in both transmitter and receiver increases tracing distance
- 3 piece handle used to conduct "blind" searches when starting point is unknown
- Noise canceling circuitry eliminates power line interference
- Powered by 16 standard AA batteries

Multi-Frequency Digital Line Tracer
TW-8800

Features

- Advanced digital signal processing
- Automatic gain control
- Multi-frequency operation
- Weather-resistant case
- Push-button depth measurement
- Large easy-to-read LCD display
- Hard carrying case

Single-Frequency Digital Line Tracer
TW-7700

Features

- Advanced digital signal processing
- Automatic gain control for maximum sensitivity
- Audio and visual left/right guidance
- Weather resistant design
- Large easy-to-read LCD display
- Operates on standard batteries
- Hard carrying case
- Push button depth measurement
- Instant target response

Valve Box Locator
M-97

Features

- Designed for finding buried or paved over valves, valve boxes, or manhole covers
- Push button operation
- Automatic ground reject
- High sensitivity for use on soil, asphalt, or concrete
- Ultra slow auto-tune to stabilize ground turning and minimize frequency drift

INVERTED MARKING PAINT

All purpose paint that is designed to provide a very cost effective approach to marking and provide good visibility. Aervoe, the industry standard for APWA underground marking colors.
